Elk River Coal Mines Leaching Selenium, Poisoning River : Additional Reading

March 26, 2013

Dear Friend:

We [reported to you last week](#) about the selenium pollution of the Elk River in British Columbia. The story was picked up by the news media all across Canada and the north west U.S. We thought you'd like to see some of that coverage (links below). While the reportage often uses the same source news release, the significance lies in the breadth of coverage. With greater public awareness politicians and government officials in Canada and the U.S. will find increasing motivation to address the issue. The Globe & Mail article (#3 below) hints at the movement underway.
